Excerpt for 802.3br (DMLT) with the responses from SG DMLT in blue color.

## 802.3br

**5.2: “This standard defines Ethernet local area, access and metropolitan area networks”. Is this sentence correct? Is “Ethernet local area” a description or is this really a “local area Ethernet”? How does “access” by itself apply?**

**DMLT answers:**

**This sentence is correct. This means Ethernet which includes capabilities of being a local area network, an access network, and a metropolitan area network. An access network is also known as a „first mile“ or „last mile“ network. E.g. IEEE 802.3 EPONs.**

**This text refers to 5.2.b. This subclause is the scope of the base standard. This amendment does not intend to change the scope of the base standard. If this is a significant concern, a maintenance request may be submitted by the commenter.**

**8.1 move the statement in 8.1 to 5.2b... (see 802.3bt)**

**DMLT answer: Accepted in Principle: Deleted the sentence and adjusted the IEEE 802 Five-Criteria, Compatibility Requirement.**

**8.1 Need to provide the full names for standards referenced in the PAR form in 8.1.**

**DMLT answer: No longer applicable, see comment above.**
